

Written Electrical Safety Program

Introduction:

NPM can write or assist with the implementation of an Electrical Safety Program which should be a part of your site's overall occupational health and safety management system, when one exists. The Electrical Safety Program will direct activity appropriate to the risk associated with electrical hazards at your site.

Program Development Process

1. NPM will visit your site to meet your team, discuss your operations, walk through your facility, and get an understanding of your specific needs. Existing policies will be collected and discussed, when applicable.
2. NPM will write an Electrical Safety Program for your sites specific needs.
3. NPM will present the program to your safety management and key staff.

Program Components:

- Electrical Safety Procedures
- Risk Assessment Procedures
- Job Briefing and Energized Work Procedures
- Lock Out, Tag Out Policy
- Electrical Safety Auditing Plan
- Training Program Plan

Deliverables:

- Written Electrical Safety Program
 - Lock Out Policy
 - Job Briefing Form
 - Energized Work Permit

Related Service – Program Audit

Codes and standards are periodically updated and NPM can audit your existing program to “to verify that the principles and procedures of the electrical safety program are in compliance” as required by Article 110.1(I) every three years.
